PROFILE

I am a dedicated and innovative Software Engineer with a comprehensive understanding and hands-on experience in numerous programming languages, including Unity/C#, React Native, JavaScript, Java, Python, HTML, CSS, PHP, MySQL, and Firebase. My passion for technology and problem-solving has led me to acquire a diverse skill set not limited to software development alone.

I also specialize in graphic design, proficient in creating visually compelling content with Adobe tools. This artistic flair combined with technical expertise enables me to approach challenges from unique perspectives, leading to creative and efficient solutions.
In addition to my programming and design skills, I have ventured into the realm of web development. I have experience building professional and intuitive websites using platforms such as Wix, Shopify, and other website building software. This knowledge is a testament to my ability to adapt to different technologies and tools, which reflects my dedication to continual learning.

My entrepreneurial spirit has seen me initiate and manage my own projects, the most significant of which is my small online store, suptechstore.com. This venture has helped me hone my skills in e-commerce, digital marketing, and customer relationship management.

While I have been mainly focused on individual projects to date, I am eager to bring my versatile set of skills to a collaborative team environment. I am always open to new opportunities where I can contribute and grow while helping organizations solve their most challenging problems.
